LIVE POLLING URL

WHY YOU NEED THIS

Every marketplace invents its own XML schema.

Bazaraki expects `<ads><ad>` with rubric and district. Google Shopping wants `<rss><item>` with the `g:` namespace. Facebook uses yet another shape. Most shops pay €50-200/month per connector or hand-roll brittle scripts that break on every product rename.

WITHOUT THIS MODULE

• One Python script per marketplace • Hard-coded field paths break on rename • Bazaraki rubric IDs typed manually • No preview before going live

WITH THIS MODULE

• One UI form per marketplace • Field mappings edited in 2 clicks • 212 Bazaraki rubrics bundled in • Preview first 3 items button • Live URL – marketplaces poll directly

WHAT YOU GET

Live polling URL Every feed at /feed/<code>.xml. Marketplaces poll directly – no SFTP, no manual uploads.	Editable mappings Each XML element is one row. Reorder, add, remove from the UI. No code. Survives every rename.	4 source types Product field path, static value, template with {placeholders}, and image collection wrapper.
 Built-in transforms Uppercase, lowercase, strip HTML, round to 2 decimals, ISO date – per mapping row.	 Cache + hourly cron Served from ir.attachment cache. Configurable refresh. Hourly cron regenerates active feeds.	# Bazaraki catalogue 212 rubrics + 168 districts pre-loaded. Fuzzy auto-match to your Odoo categories.
 CDATA support Wrap any element for HTML descriptions, URLs with ampersands, special characters.	 Per-product fields New Marketplace Feed tab: condition, brand, warranty, year, model override, delivery flag.	 Zero dependencies Pure Python + XML. No external libraries. No infrastructure changes needed.

THREE PRESETS, ONE CLICK

CYPRUS MARKET Bazaraki Full Bazaraki Cyprus catalogue bundled. 212 categories + 168 districts. The only Odoo module with native Bazaraki support.	SEARCH ADS Google Shopping Correct g: namespace, required attributes, image and price formatting. Submit URL to Merchant Center and go.	SOCIAL COMMERCE Facebook Catalog Facebook and Instagram shopping format. All required fields mapped. One URL for both platforms.
